

AUTOSAR

ISO 26262

SECURITY

ECOSYSTEM

Agenda:

- Autosar Architecture
- Suppliers Pyramid
- Non-Autosar Methodology
- Autosar Methodology

Core Partner and Members:

The 284 AUTOSAR Partners

9 Core Partners

2 Strategic Partners

55 Premium Partners

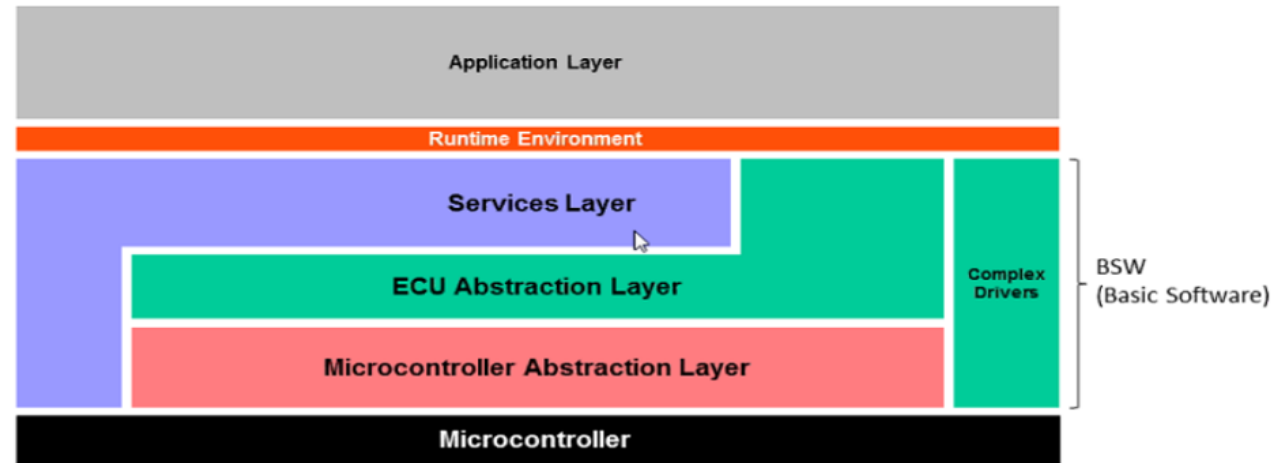

51 Development Partners

145 Associate Partners
22 Attendees

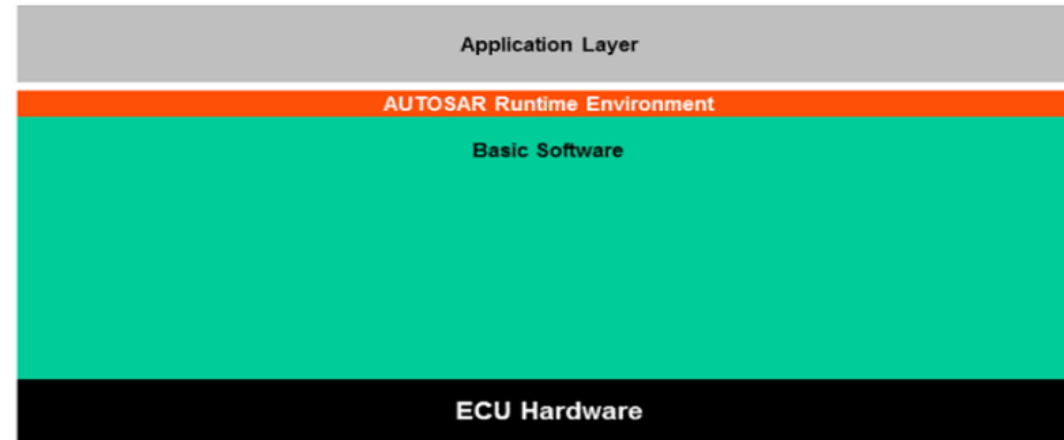

Autosar Architecture 1-5:

Five Layers:

- Application** : Functionalities of the ECU.
- RTE** : Run Time Environment.
- Services** : Services if the basic software to the application Layer.
- ECU Abstraction** : Abstraction of the number and types of the existing devices.
- Microcontroller Abstraction** : Abstraction of the real physical HW

Autosar Architecture 2-5:

First class of implementation conformance ICC1:

- Inner structure of BSW is not defined.
- Important Interfaces
 - * RTE <-> Application Layer
 - * messages on communication bus

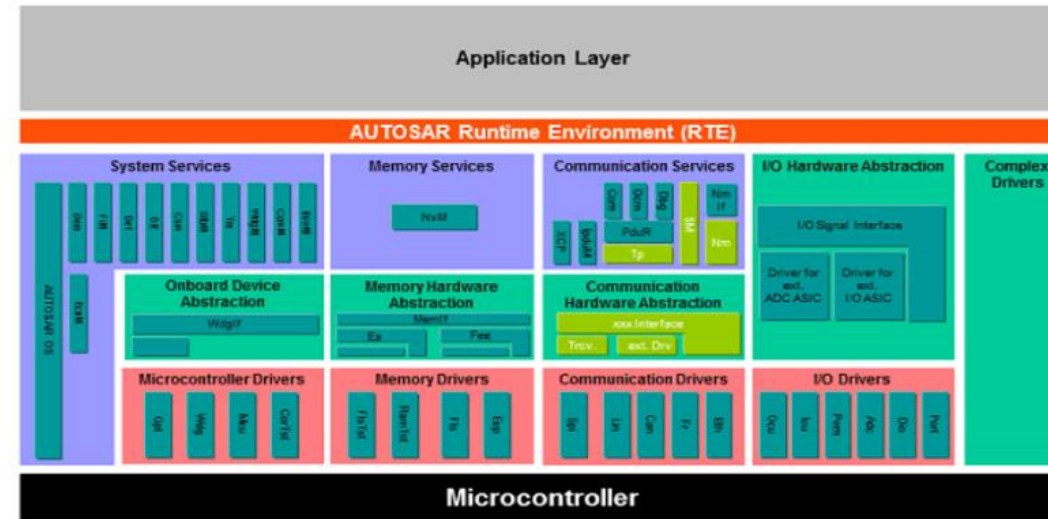

Autosar Architecture 3-5:

Second class of implementation conformance ICC2:

- Clusters inside the BSW are defined.
- Clusters Consist of modules that belong together.
- Interfaces of the cluster are defined.

Autosar Architecture 4-5:

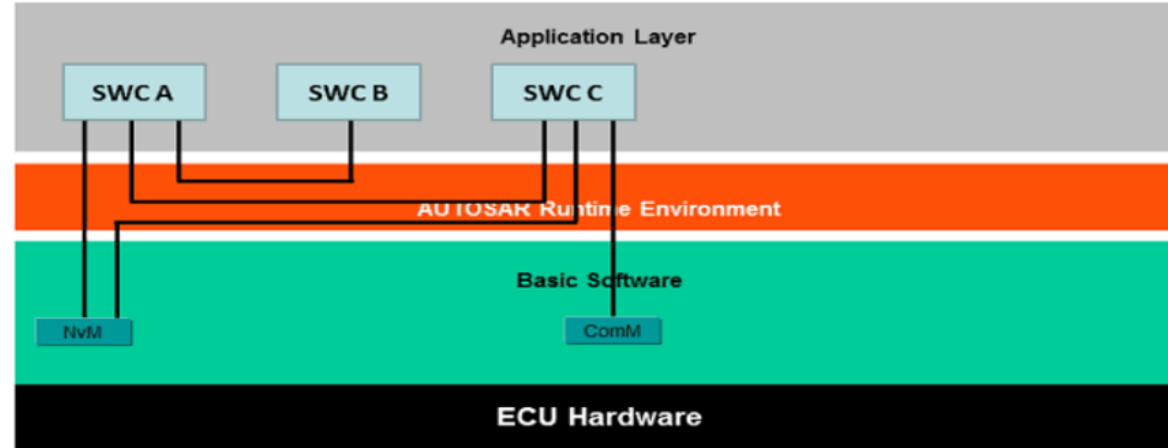

Picture is not complete and does not show all BSW modules!

Third class of implementation conformance ICC3:

- All BSW modules with all interfaces defined.
- Every BSW module is allocated to exactly one cluster .

Autosar Architecture 5-5:

Application Layer:

- SWCs are defined here.
- SWCs contain applications (ECU functionalities).
- All Communications over connected ports realise via RTE layer.

Suppliers Pyramid :

In a modern supply chain like the ones used in the automotive industry, suppliers are organized in sequential levels called tiers.

OEM: Ex: VolvoCars, PSA Group, Ford

Tier1: Lear Corporation, Continental.....

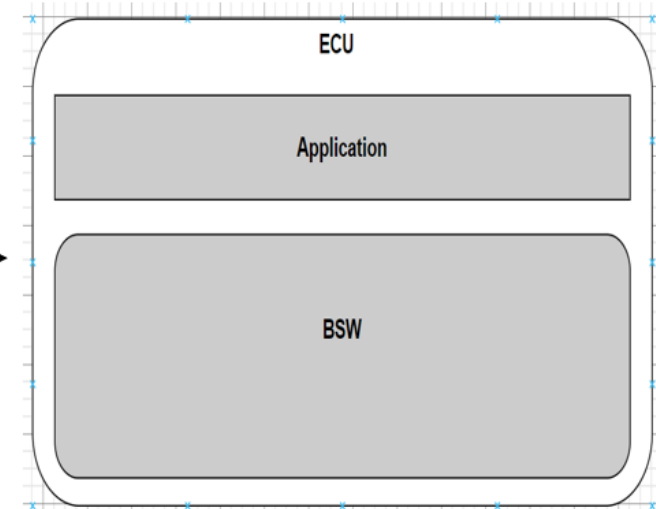

Tier2: Vector Informatik, Elektrobit.....

Tier3: infineon technologies

Non-Autosar Methodology :

Network communication of the vehicle is specified in (DBC,FIBEX,LDF) format file

The ECU is configured based on the DBC,FIBEX,LDF file

Autosar Methodology :

Software Component Description

System Description

Extract of System Description

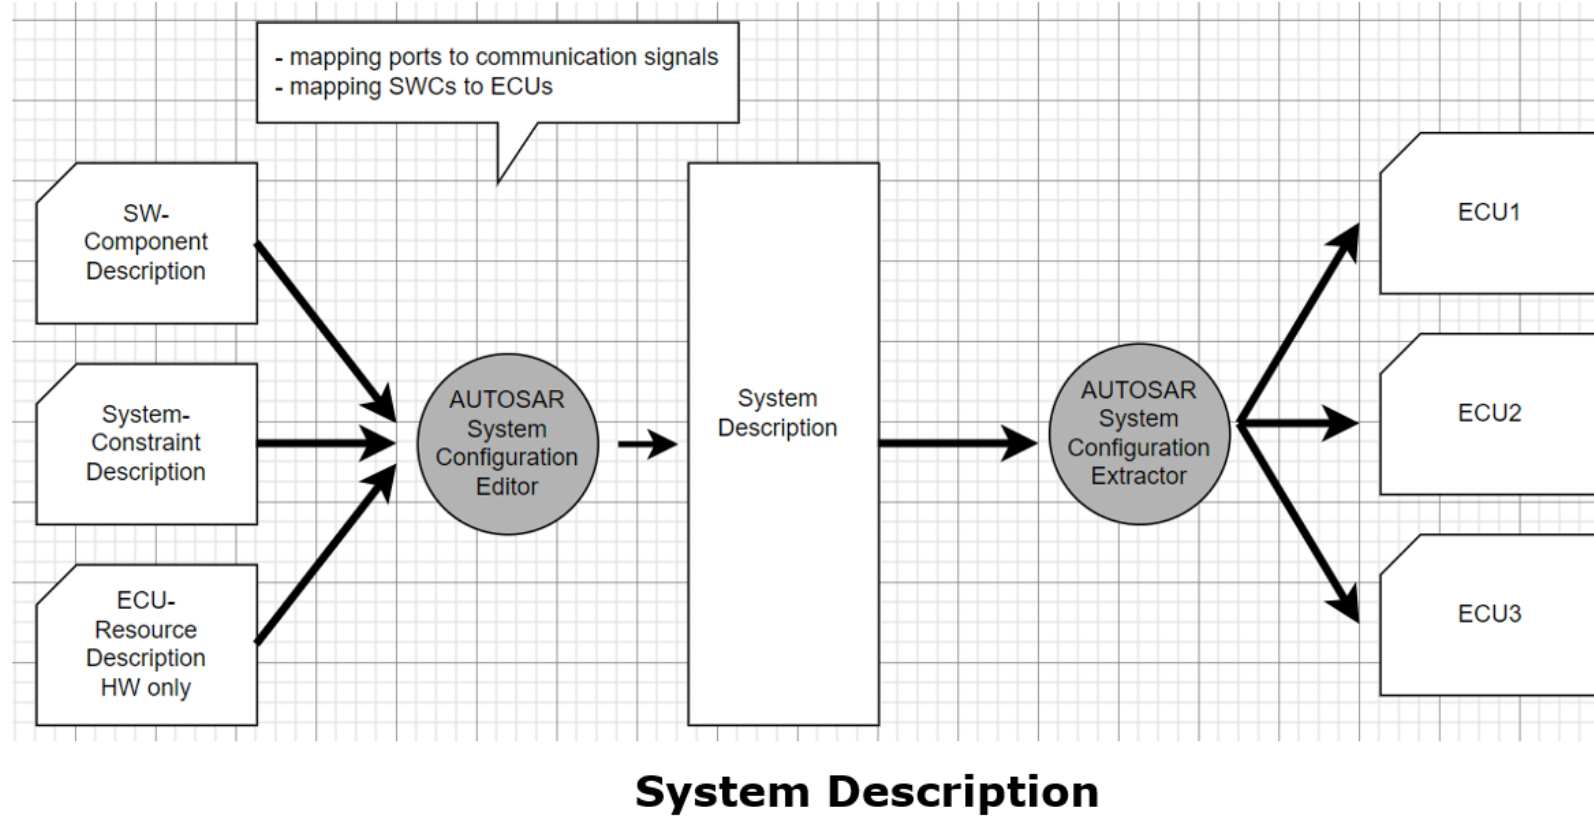

ECU configuration Description

Autosar Methodology

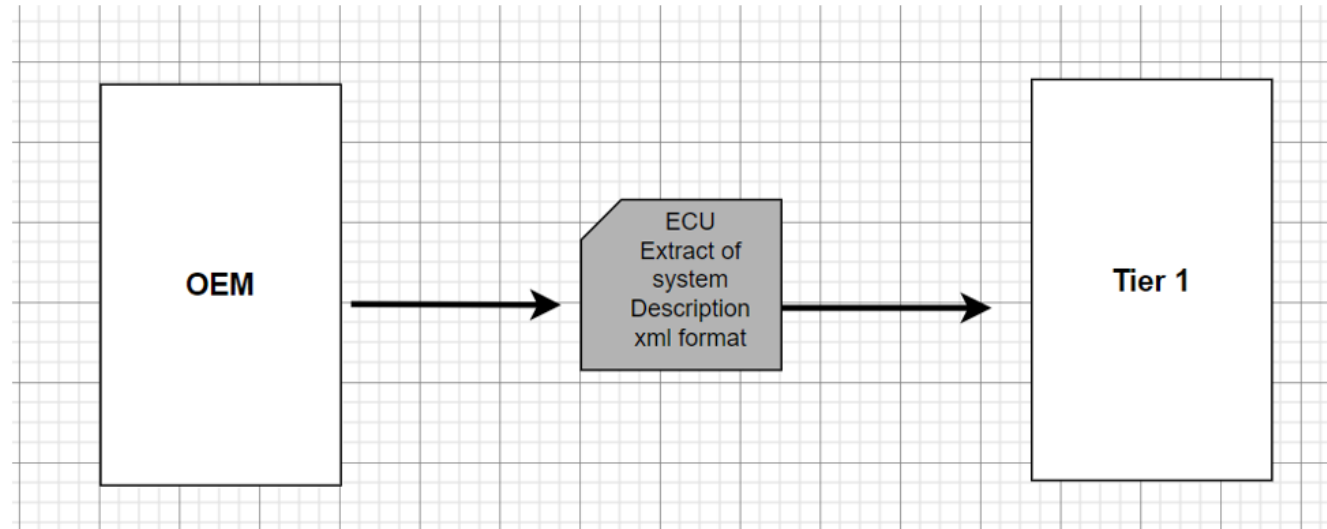

- AUTOSAR defines a Methodology
- not a complete process description
- a common technical approach for some steps of system development
- AUTOSAR defines ARXML as standardized format for data exchange

Autosar Methodology

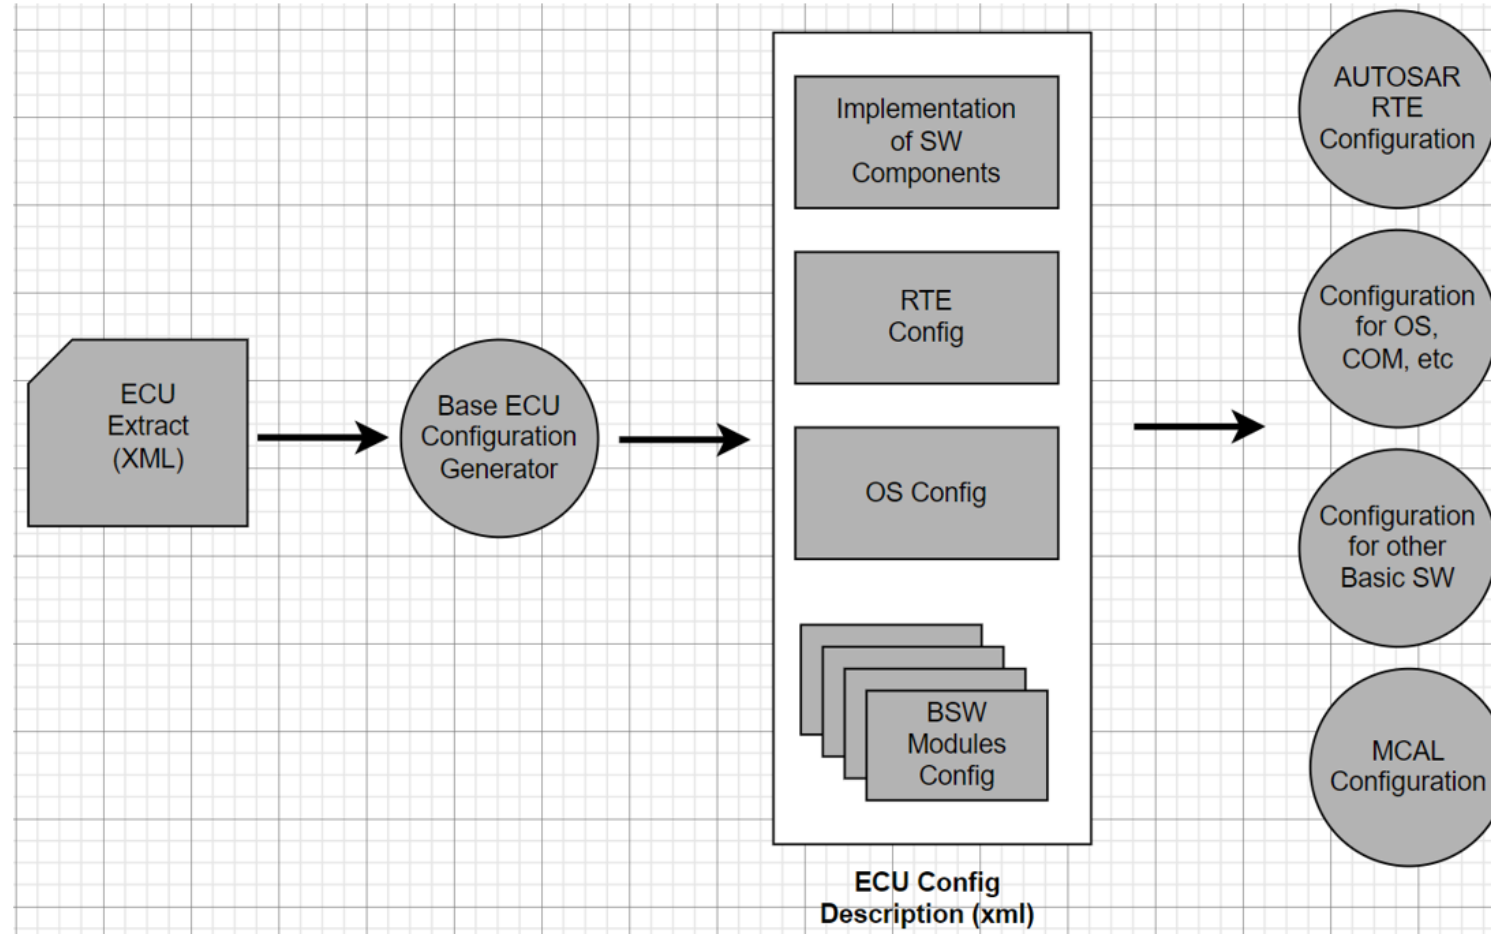

Autosar Methodology

AUTOSAR Workflow between OEM and Tier1.

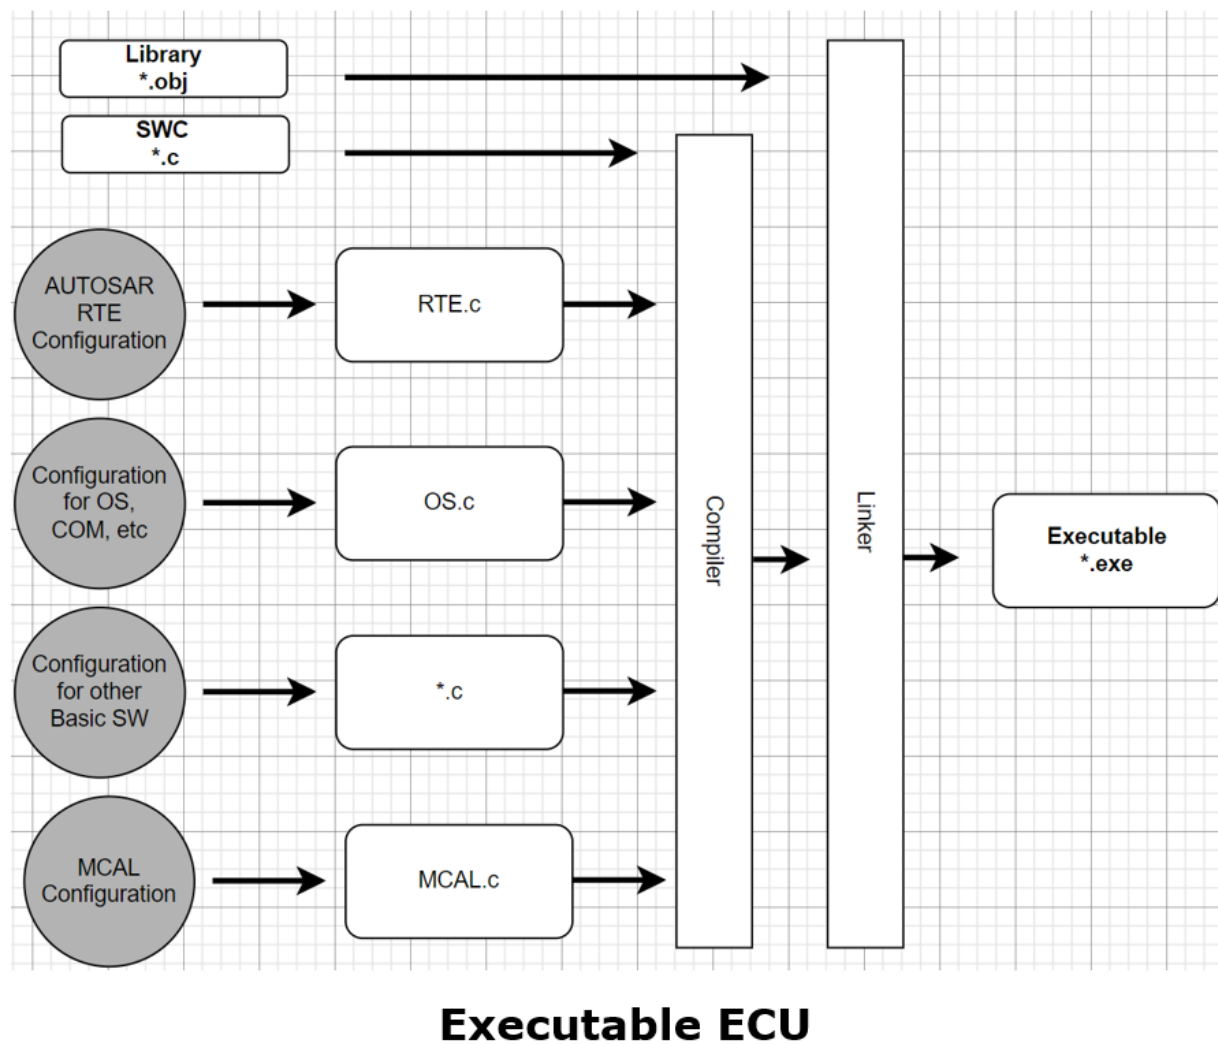

- Interface between OEM and Tier1: ECU Extract of system Description ECUEX
- OEM Creates ECUEX based on vehicle system design
- TIER1 configures AUTOSAR ECU based on ECUEX

Autosar Methodology

ECU Configuration

Autosar Methodology

Q/A?
